### About Assembly Biosciences

Assembly Biosciences, Inc. is a public biotechnology company advancing a new class of oral biologic drugs for addressing the gut microbiome and novel approaches to discovering drugs for the treatment of hepatitis B virus (HBV) infection. Assembly's team has significant experience in infectious disease drug discovery and development and has collectively helped bring more than 10 anti-infective products to the market. The company's HBV-Cure Program is aimed at increasing cure rates and is advancing multiple drug candidates that address upstream and downstream viral targets in the HBV lifecycle for possible use in combination therapy. The company's Microbiome Program consists of a fully integrated platform that includes a robust strain identification and selection process, methods for strain isolation and growth under cGMP conditions, and a patent pending delivery system, GEMICEL™, which allows for targeted oral delivery of live biologic and conventional therapies to the lower GI tract. The lead program from this platform, AB-M101, is in development for the treatment of *C. difficile* infection. For more information, visit [assemblybio.com](http://assemblybio.com).
